Disclaimer:		Positive results are indicative of active infection with 2019-nCoV but do not rule out bacterial infection or co-infection with other viruses. Negative results do not preclude 2019-nCoV infections and should not be used as the sole basis for treatment or other patient management decisions. Negative results must be combined with clinical observations, patient history, and epidemiological information. Optimum specimen types and timing for peak viral levels during infections have not been determined. False-negative results may occur if the specimen is improperly collected, transported, or handled. False-negative results may also occur if amplification inhibitors are present in the specimen or if inadequate numbers of organisms are present in the specimen. Laboratories are required to report all positive results to the (MOH) Ministry of health.
